ISO/TS 21564:2019 (E)

Health Informatics — Terminology resource map quality measures (MapQual)

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Determinants of map quality

4.1 General
4.2 Terminological resource capacity
4.2.1 General
4.2.2 Determinant 1: Common categorial structure
4.2.3 Determinant 2: Shared semantic domain
4.2.4 Determinant 3: Language and translation
4.3 Equivalence of individual maps
4.3.1 General
4.3.2 Determinant 4: Equivalence identification/Publication
4.3.3 Determinant 5: Equivalence assessment
4.3.4 Determinant 6: Map set outliers
4.4 Building a map set
4.4.1 Map development process
4.4.2 Determinant 7: Clear documentation of the purpose of the map
4.4.3 Determinant 8: Currency of the map
4.4.4 Determinant 9: Business arrangements
4.4.5 Determinant 10: Methodology documentation
4.4.6 Validation
4.4.6.1 General
4.4.6.2 Determinant 11: Percentage of map validated
4.4.6.3 Determinant 12: Method of validation
4.4.7 Determinant 13: Decision making — Consensus building process
4.4.8 Determinant 14: Tools used to develop or maintain the map
4.4.9 Determinant 15: Workforce
4.5 Map governance and maintenance
4.5.1 Determinant 16: Governance
4.5.2 Determinant 17: Map maintenance

5 Using map quality determinants

5.1 Required determinants
5.2 Level of quality
5.2.1 Step 1: Establish map quality requirement
5.2.2 Step 2: Assess map against requirement
5.2.3 Step 3: Calculate the score and actions required

6 Use cases

6.1 General
6.2 Determining requirements for a purpose
6.2.1 General
6.3 Direct patient care use case
6.3.1 General
6.3.2 Direct patient care level of conformance required and rationale
6.4 Administrative, financial or service planning use case
6.4.1 General
6.5 Administrative, financial or service planning level of conformance required and rationale
6.6 Other use cases

Annex A (informative) Example of map quality evaluation
