Medical laboratories - Practical guidance for the estimation of measurement uncertainty

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Abbreviated terms and symbols 13

5 Measurement uncertainty for medical laboratories 13
5.1 Measurement uncertainty concept 13
5.2 Maximum allowable measurement uncertainty 16
5.3 Sources of measurement uncertainty 17
5.4 Expression of measurement uncertainty 18
5.5 Use of relative standard uncertainty for calculating uncertainty estimates 21
5.6 Reporting measurement uncertainty 22

6 Steps for estimating uncertainty of measurand values 22
6.1 Measurand definition 22
6.2 Measurement precision 24
6.3 Effect of reagent and internal quality control lot changes on estimating uncertainty 24
6.4 Laboratories using multiple measuring systems for the same measurand 25
6.5 Uncertainty of end-user calibrator values (ucal) 25
6.6 Measurement bias 26
6.7 Process overview for estimation of measurement uncertainty 26
6.8 Re-estimation of measurement uncertainty 27
6.9 Qualitative results based on numerical results 27
6.10 Uncertainty of counting entities 28
6.11 Limitations of measurement uncertainty estimates 28

Annex A (informative) Worked examples of estimating measurement uncertainty 29

Annex B (informative) Example of applying measurement uncertainty to result interpretation 58

Annex C (informative) Supplementary information on some aspects of uncertainty 60

Bibliography 71
