Molecular in vitro diagnostic examinations - Specifications for pre-examination processes in metabolomics in urine, venous blood serum and plasma

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	General considerations	3
5	Urine	4
5.1	Outside the laboratory	4
5.1.1	Urine collection	4
5.1.2	Transport requirements	5
5.2	Inside the laboratory	5
5.2.1	Specimen reception	5
5.2.2	Storage requirements	6
5.2.3	Urine sample processing	6
5.2.4	Long-term storage requirements for urine samples	6
5.2.5	Urine thawing	6
6	Blood	7
6.1	Outside the laboratory	7
6.1.1	Primary collection	7
6.1.2	Transport of pre-processed specimens to laboratory	8
6.2	Inside the laboratory	8
6.2.1	Specimen reception	8
6.2.2	Sample processing	9
6.2.3	Transport of processed samples to a laboratory for metabolomics analysis or transport to a biobank	9
6.2.4	Long-term storage requirements	9
6.2.5	Serum and plasma thawing and use	10
Annex A (informative)	Instability of the metabolome	11
