Foreword .....	4
Introduction.....	5
1 Scope .....	6
2 Normative references .....	6
3 Terms and definitions.....	7
4 Abbreviations.....	8
5 Persons with reduced mobility .....	8
5.1 General .....	8
5.2 Functionality of mobile applications.....	9
5.2.1 Usage without vision .....	9
5.2.2 Usage with limited vision.....	9
5.2.3 Usage with limited or without colour perception.....	9
5.2.4 Usage without hearing.....	10
5.2.5 Usage with limited hearing .....	10
5.2.6 Usage with limited or without vocal capability .....	10
5.2.7 Usage with limited manipulation or strength.....	10
5.2.8 Usage with limited reach .....	10
5.2.9 Reduction of photosensitive seizure triggers .....	10
5.2.10 Usage with cognitive impairments.....	11
5.2.11 Privacy .....	11
6 Accessible mobility applications.....	11
6.1 Typical features of general mobility applications.....	11
6.2 Accessible design of mobility applications .....	12
6.3 Optimised accessible design of mobility applications .....	12
6.3.1 General .....	12
6.3.2 Information and services from a single source .....	12
6.3.3 Finding the right mobility application.....	13
6.3.4 Individual configurability of the application .....	13
6.3.5 Requirements for information and services .....	14
6.3.6 Task-related design .....	14
6.3.7 Consistency of visual presentation .....	15
7 City and regional buses.....	15
7.1 General .....	15
7.2 Stop information (static) .....	15
7.3 Vehicle information (static).....	16
7.4 Information about the vehicle prior to arrival at the boarding stop (dynamic).....	17
7.5 Communication with a vehicle upon arrival at the boarding stop .....	18
7.6 Information during boarding and unboarding.....	18
7.7 Information prior to unboarding.....	18
7.8 Information on the bus during the journey .....	19
7.9 Demand-responsive transport .....	19
7.10 Autonomously driving shuttles .....	20

8	Trams, underground, suburban, regional, and long-distance trains .....	21
8.1	General .....	21
8.2	Station information (static) .....	21
8.3	Vehicle information (static) .....	22
8.4	Information about the vehicle prior to arrival at the boarding station (dynamic) .....	23
8.5	Communication with a vehicle upon arrival at the boarding station.....	24
8.6	Information during boarding and unboarding.....	24
8.7	Information prior to unboarding .....	25
8.8	Information on the train during the journey .....	25
9	Acoustic signals in public spaces .....	26
9.1	Classification of the acoustic signals .....	26
9.2	Requirements for the functionality of a mobility application .....	27
9.3	Public means of transport.....	28
9.4	Acoustic signals at traffic lights.....	28
9.5	Acoustic signals at level crossings.....	28
9.6	Acoustic locator and orientation signals for points of interest.....	28
9.7	Acoustic warning signals on vehicles.....	29
9.8	Acoustic signals at construction sites and obstructions .....	29
10	Service requests.....	29
10.1	General .....	29
10.2	Vehicle-related service requests .....	30
10.3	Service requests in public spaces.....	30
10.4	Information and emergency call points .....	31
10.5	Announcements at stations .....	31
10.6	Lifts .....	31
11	Technical requirements.....	32
11.1	Communication with the radio beacon .....	32
11.2	Authentication and authorisation.....	32
11.3	Data protection and encryption.....	33
11.4	Meta information.....	33
11.5	Electronic references to mobility applications .....	33
11.6	Reachability via URLs.....	34
11.7	Homogenisation.....	34
<b>Annex A (informative) Types of disability and derived needs .....</b>		<b>35</b>
<b>Annex B (informative) Example concept for a mobility application .....</b>		<b>36</b>
B.1	Architecture.....	36
B.2	Mode of operation Acoustic beacon.....	36
B.3	Mode of operation internet service for data .....	37
B.4	Mode of operation mobility application .....	37
B.5	User and rights management for services.....	37
B.6	Service module as mediator .....	37
<b>Bibliography.....</b>		<b>39</b>

## Tables

Table A.1 — Types of disability and related needs.....	35
Table A.2 — Requirements and types of disability.....	35
