

ISO 20397-1:2022-03 (E)

Biotechnology - Massively parallel sequencing - Part 1: Nucleic acid and library preparation

Contents		Page
Foreword		v
Introduction		vi
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Nucleic acid sample quality evaluation	2
4.1	General	2
4.2	Sample quantification	3
4.3	Sample purity	3
4.4	Sample integrity	3
4.4.1	General	3
4.4.2	Agarose gel electrophoresis	3
4.4.3	Capillary gel electrophoresis	3
4.4.4	Microfluidic analysis system	3
4.4.5	PCR method	3
5	Nucleic acid library preparation	4
5.1	General	4
5.2	Fragmentation	4
5.2.1	General	4
5.2.2	Mechanical fragmentation	4
5.2.3	Enzymatic fragmentation	4
5.2.4	Chemical fragmentation	5
5.2.5	Fragmented nucleic acid sample quantity	5
5.2.6	Fragmented nucleic acid sample purity	5
5.2.7	Fragmented nucleic acid size distribution	5
5.2.8	Fragmented nucleic acid purification using gel electrophoresis	5
5.3	Addition of universal sequences	5
5.3.1	Repair	5
5.3.2	Ligation of adapter	5
5.3.3	Barcoding/indexing	6
5.4	Size selection	6
5.5	Amplification	6
5.6	Purification and clean up procedures	6
5.7	Library quantification	7
5.7.1	Library quantification method	7
5.7.2	Selection of quantification method	7
5.8	Library qualification	7
5.8.1	General	7
5.8.2	Methods	7
6	Validation	7
7	Reference materials or controls	8
7.1	General	8
7.2	Control samples	8
7.3	Positive control	8
7.4	Negative control	9
7.5	No-template control	9

7.6	Spike-in control.....	9
7.7	Reference materials	9
8	Contaminations	9
8.1	General.....	9
8.2	Primary sample evaluation.....	9
8.3	Protocol and operation procedure.....	10
Annex A (informative) Checklist for sample quality assessment before library construction		11
Annex B (informative) Examples of quality criteria for selected MPS platforms and applications		12
Annex C (informative) Reference material list.....		14
Bibliography.....		15
