## Biotechnology - Analytical methods - Risk-based approach for method selection and validation for rapid microbial detection in bioprocesses

---

| <b>Contents</b>    |   | <b>Page</b> |
|--------------------|---|-------------|
| Foreword .....     |   | v           |
| Introduction ..... |   | vi          |
| 1                  | Scope .....   | 1           |
| 2                  | Normative references .....                                  | 1           |
| 3                  | Terms and definitions .....                                 | 1           |
| 4                  | General considerations .....                                | 7           |
| 5                  | Risk management for microbiological contamination .....     | 7           |
| 5.1                | Risk management in manufacturing process .....              | 7           |
| 5.2                | Risk management in microbial testing .....                  | 8           |
| 6                  | Selection of a fit-for-purpose assay .....                  | 9           |
| 6.1                | General .....   | 9           |
| 6.2                | Assay selection .....                                       | 10          |
| 6.3                | Kit or system selection .....                               | 10          |
| 6.4                | Considerations for various test types .....                 | 11          |
| 6.5                | User requirement specifications .....                       | 12          |
| 6.5.1              | General .....   | 12          |
| 6.5.2              | Speed .....   | 12          |
| 6.5.3              | Sample volume .....   | 12          |
| 6.5.4              | In-process versus final release testing .....               | 12          |
| 6.5.5              | Specificity .....   | 12          |
| 6.5.6              | Sensitivity .....   | 13          |
| 7                  | Validation .....  | 13          |
| 7.1                | General concepts .....                                      | 13          |
| 7.2                | Selection of microorganisms for validation .....            | 14          |
| 7.3                | Quality by design of method validation .....                | 15          |
| 7.4                | Revalidation method .....                                   | 15          |
| 7.5                | System validation .....                                     | 16          |
| 7.6                | Use of reference material in validation .....               | 16          |
| 7.7                | Acceptance criteria of targeted validation parameters ..... | 16          |
| 7.8                | Precision .....   | 17          |
| 7.9                | Detection limit .....                                       | 17          |
| 7.10               | Accuracy .....  | 17          |
| 7.11               | Robustness .....  | 18          |
| 7.12               | Ruggedness .....  | 18          |
| 8                  | Use and application of rapid microbial tests .....          | 18          |
| 8.1                | Number and type of samples .....                            | 18          |
| 8.2                | Testing environment .....                                   | 18          |
| 8.3                | Sensitivity .....   | 19          |
| 8.4                | Analytical specificity (microorganism detection) .....      | 19          |
| 8.5                | Comparable test data .....                                  | 19          |
| 9                  | Investigation of positive sterility results .....           | 20          |

|           |  |           |
