ISO/TS 21085:2026-08 (E)

Biotechnology - General requirements for the measurement of ultra-low concentration samples of target nucleic acid sequence

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Principle 3

5 Requirements 3
5.1 General 3
5.2 Unit 4
5.3 Personnel 4
5.4 Measurement environment 4
5.5 Equipment and reagents for measurements 5
5.5.1 General 5
5.5.2 Labware 5
5.5.3 Preventing contamination 5
5.6 Measurement method 5
5.6.1 Pre-analysis process 5
5.6.2 Measurement 6
5.6.3 Uncertainty 6

6 Validation and verification for ultra-low concentration sample of target nucleic acid sequence 7
6.1 Performance characteristics 7
6.1.1 General 7
6.1.2 Dynamic range 7
6.1.3 LOD 7
6.2 Performance evaluation of qPCR using NTC 9
6.3 Validation and verification 10
6.3.1 Validation 10
6.3.2 Verification 11

7 Reporting 11

Annex A (informative) Preparation of ultra-low concentration sample of target nucleic acid sequence using gravimetric method 13

Annex B (informative) Evaluation of adsorption to labware using an instrument capable of quantitatively evaluating macromolecular nucleic acids at ultra-low concentrations 15

Annex C (informative) Example of ultra-low concentration nucleic acid reference material 17

Annex D (informative) Protocols for competency assessment using certified reference materials 19
