

ISO/TS 15216-1:2013-03 (E)

Microbiology of food and animal feed - Horizontal method for determination of hepatitis A virus and norovirus in food using real-time RT-PCR - Part 1: Method for quantification

Contents		Page
Foreword		iv
Introduction		vii
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Principle	3
4.1	Virus extraction	3
4.2	RNA extraction	3
4.3	Real-time reverse transcription polymerase chain reaction (real time RT-PCR)	4
4.4	Control materials	4
4.5	Test results	5
5	Reagents	5
5.1	General	5
5.2	Reagents used as supplied	5
5.3	Prepared reagents	6
6	Apparatus and materials	7
7	Sampling	8
8	Procedure	8
8.1	General laboratory requirements	8
8.2	Virus extraction	9
8.3	RNA extraction	11
8.4	Real-time RT-PCR	11
9	Interpretation of results	13
9.1	General	13
9.2	Construction of standard curves	13
9.3	Calculation of amplification efficiency	13
9.4	Calculation of extraction efficiency	14
9.5	Sample quantification	14
9.6	Theoretical limit of detection	15
10	Expression of results	15
11	Test report	15
Annex A (normative) Diagram of procedure		17
Annex B (informative) Real-time RT-PCR mastermixes and cycling parameters		18

Annex C (informative) Real-time RT-PCR primers and hydrolysis probes for the detection of HAV, norovirus GI and GII and mengo virus (process control)	19
Annex D (informative) Growth of mengo virus strain MC0 for use as a process control	21
Annex E (informative) RNA extraction using the BioMerieux NucliSens® system	22
Annex F (normative) Composition and preparation of reagents and buffers	24
Annex G (informative) Generation of double-stranded DNA (dsDNA) control stocks	26
Annex H (informative) Generation of external control RNA (EC RNA) stocks	28
Annex I (informative) Typical optical plate layout	30
Bibliography	31
