ISO 19822:2018 (E)

Fertilizers and soil conditioners — Determination of humic and hydrophobic fulvic acids concentrations in fertilizer materials

Contents

Foreword

Introduction

1 Scope

2 Normative References

3 Terms and definitions

4 Principles

5 Warnings

6 Reagents

7 Apparatus

8 Preparing crucibles, drying, and weighing samples

- 8.1 Preparing crucibles
- 8.2 Drying and weighing solid analytical samples
- 8.3 Drying and weighing liquid samples

9 Extraction procedure

10 Determination of ash content

11 Separation of Hydrophobic Fulvic Acids (HFA)

12 Hydrogen ion exchange

13 Calculations

- 13.1 Determination of ash-free HA weight
- 13.2 Determination of ash-free HFA weight
- 13.3 Determination of % analyte in solid analytical samples
- 13.4 Determination of % analyte in liquid samples

14 Resin regeneration and column preparation

Annex A (informative) Procedure to confirm the presence lignosulfonates

- A.1 General
- A.2 Sulfur concentration
- A.3 FTIR analysis
- A.3.1 Spectra of sulfonate bonds
- A.3.2 Spectra of fulvic acids
- A.3.3 Specifications for FTIR analysis
- A.3.4 Representative spectra of a commercial lignosulfonate
- A.3.5 Spectra of International Humic Substances Society 2S103F Suwannee River Fulvic Acid Standard
- A.3.6 Detail of Mid-FTIR Spectra 600 cm−1 to 1 900 cm−1 of International Humic Substances Society 2S103F Suwannee River Fulvic Acid Standard

Annex B (informative) ISO/CD 19822 interlaboratory study
