ISO 22117:2019 (E)

Microbiology of the food chain — Specific requirements and guidance for proficiency testing by interlaboratory comparison

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Scheme design and purpose

- 4.1 General
- 4.2 Scheme objectives
- 4.3 Laboratory requirements for schemes
- 4.4 Choice of test matrices
- 4.5 Information on test methods used by the PT provider
- 4.6 Statistical design

5 Technical requirements and guidance for sample design and content

- 5.1 Sources, characterization and traceability of organisms
- 5.2 Target organisms level
- 5.3 Non-target organisms and interferences
- 5.4 Matrix selection and effects

6 Sample verification by the provider

- 6.1 General
- 6.2 Sample homogeneity testing — General considerations
- 6.3 Homogeneity testing for quantitative (enumeration) samples
- 6.4 Homogeneity testing for qualitative methods
- 6.5 Stability testing by the provider
- 6.5.1 General
- 6.5.2 Stability during storage conditions
- 6.5.3 Stability during transport conditions

7 Sample handling

- 7.1 General
- 7.2 Instructions to participants

8 Performance evaluations

- 8.1 General
- 8.2 Preliminary considerations
- 8.3 Assessment of quantitative methods
- 8.3.1 General
- 8.3.2 Distribution of data
- 8.3.3 Determining the assigned value
- 8.3.4 Uncertainty of the assigned value
- 8.3.5 Methods of assessing performance
- 8.3.6 Using z-scores
- 8.3.6.1 General
- 8.3.6.2 The target standard deviation for z-score calculations
- 8.3.6.3 Multiple results in z-score systems
- 8.3.6.4 Using scaled median absolute deviation (MADe) from the median values
- 8.3.7 Other methods of performance evaluation

8.3.7.1 General
8.3.7.2 Using the 0,5 log10 rule
8.3.7.3 Using percentiles
8.3.7.4 Poisson 95 % confidence interval (CI)
8.3.7.5 Special considerations for most probable number methods
8.3.8 Long-term performance assessment
8.3.8.1 General
8.3.8.2 Low count assessments
8.3.8.3 High count assessments
8.4 Assessment of qualitative methods
8.4.1 General
8.4.2 Performance of individual laboratories
8.4.3 Scheme comparisons of laboratory performance

Annex A (informative) Example of details to be included in a PT scheme plan

Annex B (informative) Preparation of fungal spore suspensions

B.1 General
B.2 Procedure
B.2.1 General
B.2.2 Preparing spore suspensions from agar plates
B.2.3 Preparing spore suspensions from agar slopes
B.2.4 Storage
B.2.5 Quality control checks

Annex C (informative) Methods of testing for variation between portions of test materials

C.1 T1 − T2 test
C.2 Test for sufficient homogeneity

Annex D (informative) Example of a safety data sheet

Annex E (informative) A practical method to assess long-term performance of participants in PT schemes using enumeration methods

E.1 Preparing data for analysis
E.2 Dealing with censored data
E.3 Plotting results
E.4 Allocation of scores
