ISO/TS 21569-3:2020 (E)

Horizontal methods for molecular biomarker analysis — Methods of analysis for the detection of genetically modified organisms and derived products — Part 3: Construct-specific real-time PCR method for detection of P35S-pat-sequence for screening for genetically modified organisms

Contents

Foreword

1 Scope

2 Normative references

3 Terms and definitions

4 Principle

5 Reagents and materials
- 5.1 General
- 5.2 PCR reagents

6 Apparatus

7 Procedure
- 7.1 Test sample procedure
- 7.2 Preparation of the DNA extracts
- 7.3 PCR setup
- 7.4 Temperature-time programme

8 Accept/reject criteria
- 8.1 General
- 8.2 Identification
- 8.3 Calculation of P35S-pat copy numbers

9 Validation status and performance criteria
- 9.1 Robustness of the method
- 9.2 Collaborative trial for determination of LOD
- 9.3 Collaborative trial for quantification of the P35S-pat construct in rapeseed
- 9.4 Sensitivity
- 9.5 Specificity

10 Test report

Annex A (informative) GenBank BLASTN Search

Annex B (informative) Joint Research Commission GMO-Matrix
