ISO 16140-5:2020 (E)

Microbiology of the food chain — Method validation — Part 5: Protocol for factorial interlaboratory validation for non-proprietary methods

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 General principles for the factorial interlaboratory validation of non-proprietary methods

- 4.1 General
- 4.2 Validation against a reference method
- 4.3 Validation without a reference method

5 Qualitative methods — Technical protocol for factorial interlaboratory validation

- 5.1 In-house validation study
- 5.2 Interlaboratory validation study against a reference method
- 5.2.1 General considerations
- 5.2.2 Measurement protocol
- 5.2.3 Selection of the factors to be studied
- 5.2.4 Experimental design
- 5.3 Calculations and summary of data
- 5.4 Interpretation of data
- 5.4.1 Paired study
- 5.4.2 Unpaired study
- 5.4.3 Analysis of factorial effects with respect to RLOD

6 Quantitative methods — Technical protocol for factorial interlaboratory validation

- 6.1 In-house validation study
- 6.2 Interlaboratory validation study against a reference method
- 6.2.1 General considerations
- 6.2.2 Measurement protocol
- 6.2.3 Experimental design
- 6.3 Calculations, summary, and interpretation of data
- 6.3.1 Summary of test results
- 6.3.2 Precision data
- 6.3.3 Accuracy profile
- 6.4 Interlaboratory validation study without a reference method

Annex A (informative) List of factors and factor levels for factorial validation

Annex B (informative) Example of a factorial interlaboratory study for a quantitative method

- B.1 General
- B.2 Study design
- B.3 Calculations and summary of data
- B.3.1 Summary of the results of laboratories 1 to 5 of the interlaboratory study
- B.3.2 Precision data
- B.3.3 Accuracy profile

Annex C (informative) Example of a factorial interlaboratory study for a qualitative method
