

ISO 21543:2020 (E)

Milk and milk products — Guidelines for the application of near infrared spectrometry

Contents

	Foreword
1	Scope
2	Normative references
3	Terms and definitions
4	Principle
4.1	General
4.2	Measurement principles
4.2.1	Transmittance (transmission)
4.2.2	Diffuse reflectance (reflection)
4.2.3	Transflectance (transflection)
5	Reagents
6	Apparatus
7	Calibration and initial validation
7.1	Selection of calibration samples
7.2	Reference analyses and NIR instruments
7.3	Calibration
7.4	Outliers in calibration
7.4.1	General
7.4.2	x-outliers
7.4.3	y-outliers
7.4.4	Combined x- and y-outliers
7.5	Validation of calibration models
7.6	Changes in measuring and instrument conditions
7.7	Outlier detection
8	Statistics for performance measurement
8.1	Standard error of prediction (SEP) and bias
8.2	Root mean square error of prediction (RMSEP)
8.3	Root mean square error of cross validation (RMSECV)
9	Sampling
10	Procedure
10.1	Preparation of test samples
10.1.1	General aspects
10.1.2	Milk and liquid milk products
10.1.3	Cheese
10.1.4	Dried milk, whey, buttermilk and whey protein powders
10.1.5	Butter
10.1.6	Yoghurt
10.2	Measurement
10.3	Evaluation of results
11	Checking instrument stability
11.1	Control samples
11.2	Instrument diagnostics

- 12** **Running performance check of calibration**
- 13** **Precision and accuracy**
 - 13.1** **Repeatability**
 - 13.2** **Intra-laboratory reproducibility**
 - 13.3** **Accuracy**
- 14** **Test report**
- Annex A** **(informative) Examples of SEP and RMSEP values**
- Annex B** **(informative) Examples of figures**
