DIN EN ISO 22753:2023-03 (E)

Molecular biomarker analysis - Method for the statistical evaluation of analytical results obtained in testing sub-sampled groups of genetically modified seeds and grains - General requirements (ISO 22753:2021, Corrected version 2022-11)

Contents

Page

European foreword ... **3**

Foreword ... **4**

Introduction ... **5**

1 Scope ... **6**

2 Normative references ... **6**

3 Terms and definitions ... **6**

4 Principle ... **9**
4.1 General ... 9
4.2 Preparation of seed/grain groups ... 9
4.3 Detection methods for the qualitative analysis of GM seed/grain in seed/grain groups ... 10
4.4 Statistical evaluation ... 10

5 Reagents ... **11**

6 Apparatus and equipment ... **11**

7 Design of testing plan ... **11**
7.1 General ... 11
7.2 Single-stage testing plan ... 11
7.3 Double-stage testing plan ... 12

8 Selection of qualitative methods ... **13**
8.1 General ... 13
8.2 Performance criteria ... 13

9 Interpretation ... **13**

10 Expression of results ... **15**
10.1 Classification of a seed/grain lot into “accept” or “reject” category ... 15
10.2 Estimation of the level of molecular biomarker in the seed/grain lot ... 15

11 Test report ... **15**

Annex A (informative) **Terms and definitions comparison table** ... **17**

Annex B (informative) **Implementation of the method to evaluate GMO content in seeds/grains example** ... **19**

Annex C (informative) **Estimation of the limit of detection for a testing plan to detect GM seeds/grains in seed lots** ... **26**

Annex D (informative) **Experimental determination of maximum group size** ... **29**

Bibliography ... **30**
