

ISO 11781:2025-04 (E)

Molecular biomarker analysis - Requirements and guidance for single-laboratory validation of qualitative real-time polymerase chain reaction (PCR) methods

Contents	Page
Foreword.....	iv
Introduction.....	v
1 Scope.....	1
2 Normative references.....	1
3 Terms and definitions.....	1
4 Principle.....	2
5 Single-laboratory validation of the performance characteristics.....	2
5.1 General.....	2
5.2 Limit of detection.....	2
5.3 Determining copies of DNA target sequences in DNA test materials.....	3
5.4 Evaluation of data for the limit of detection.....	3
5.5 PCR efficiency and variability of the measured copy number around the limit of detection.....	4
5.6 Specificity.....	4
5.6.1 General.....	4
5.6.2 Bioinformatic (in silico) test for specificity.....	4
5.6.3 Practical test for specificity.....	4
5.6.4 Robustness.....	5
6 Validation report.....	6
Annex A (informative) Estimation of the number of copies of the DNA target sequence.....	7
Annex B (informative) Determination of limit of detection, precision and PCR efficiency.....	9
Annex C (informative) Generalized linear mixed model with log-log link.....	13
Annex D (informative) Robustness testing.....	19
Bibliography.....	21
