

# DIN EN ISO 16140-4:2026-02 (E)

## Microbiology of the food chain - Method validation - Part 4: Protocol for method validation in a single laboratory (ISO 16140-4:2020 + Amd 1:2024 + Amd 2:2025)

Contents	Page
Foreword	iv
<b>[A<sub>1</sub>]</b> Foreword to Amendment 1 <b>[A<sub>1</sub>]</b>	v
<b>[A<sub>2</sub>]</b> Foreword to Amendment 2 <b>[A<sub>2</sub>]</b>	vi
Introduction	vii
<b>1</b> Scope	<b>1</b>
<b>2</b> Normative references	<b>1</b>
<b>3</b> Terms and definitions	<b>2</b>
<b>4</b> General principles of the single-laboratory detection or quantification method validation	<b>4</b>
4.1 General	4
4.2 Principles of the factorial approach	5
4.3 Principles of the conventional approach	5
<b>5</b> Technical protocol for validation — Factorial approach	<b>7</b>
5.1 Qualitative methods	7
5.1.1 Single-laboratory method validation study against a reference method	7
5.1.2 Single-laboratory method validation study without a reference method	13
5.2 Quantitative methods	15
5.2.1 Single-laboratory method validation study against a reference method	15
5.2.2 Single-laboratory method validation study without a reference method	18
<b>6</b> Technical protocol for validation — Conventional approach	<b>19</b>
6.1 Qualitative methods	19
6.1.1 Single-laboratory method validation study against a reference method	19
6.1.2 Single-laboratory method validation study without a reference method	20
6.2 Quantitative methods	21
6.2.1 Single-laboratory method validation study against a reference method	21
6.2.2 Single-laboratory method validation study without a reference method	23
<b>7</b> Summary of acceptability limits	<b>26</b>
<b>Annex A</b> (informative) List of factors and factor levels for factorial method validation	<b>27</b>
<b>Annex B</b> (informative) Calculation of in-house reproducibility for qualitative methods based on the LOD <sub>50</sub> study described in <a href="#">6.1.2.3</a>	<b>29</b>
<b>Annex C</b> (informative) Example of a factorial single-laboratory method validation study for a quantitative method against a reference method	<b>30</b>
<b>Annex D</b> (informative) Example of a factorial single-laboratory method validation study for a qualitative method against a reference method	<b>36</b>
<b>Annex E</b> (informative) Example of a factorial single-laboratory method validation study for the variability of the LOD <sub>50</sub> for a qualitative method without a reference method	<b>40</b>
<b>Annex F</b> (informative) Determination of precision if the artificially contaminated samples are unstable	<b>43</b>
<b>Annex G</b> (informative) Protocol for single-laboratory validation of alternative methods for microbiological confirmation and typing procedures	<b>45</b>
<b>[A<sub>1</sub>]</b> Annex H (normative) Validation of a larger test portion size for qualitative methods <b>[A<sub>1</sub>]</b>	<b>46</b>
<b>[A<sub>2</sub>]</b> Annex I (informative) Protocol for single-laboratory validation of identification methods of microorganisms <b>[A<sub>2</sub>]</b>	<b>51</b>
Bibliography	52
