

## **Contents**

	<b>Foreword</b>
	<b>Introduction</b>
<b>1</b>	<b>Scope</b>
<b>2</b>	<b>Normative references</b>
<b>3</b>	<b>Terms and definitions</b>
<b>4</b>	<b>Definition of values of apparent mass of the human body under vibration</b>
4.1	Apparent mass of the seated body under x-axis vibration
4.2	Applicability of values of apparent mass of the seated body under x-axis vibration
4.3	Apparent mass of the seated body under y-axis vibration
4.4	Applicability of values of apparent mass of the seated body under y-axis vibration
4.5	Apparent mass of the seated body under z-axis vibration
4.6	Applicability of values of apparent mass of the seated body under z-axis vibration
4.7	Apparent mass of the standing body under z-axis vibration
4.8	Applicability of values of apparent mass of the standing body under z-axis vibration
<b>5</b>	<b>Seat-to-head transmissibility of the seated human body under vertical vibration</b>
5.1	Definition of values of seat-to-head transmissibility
5.2	Applicability of values of seat-to-head transmissibility
<b>Annex A</b>	<b>(informative) Identification of the data used to define the range of idealized apparent mass and seat-to-head transmissibility</b>
<b>Annex B</b>	<b>(informative) Lumped mass model</b>
<b>Annex C</b>	<b>(informative) Mathematical models</b>
<b>Annex D</b>	<b>(informative) Apparent mass of seated body under vertical vibration for three different ranges of body masses (55 kg, 75 kg and 98 kg)</b>
