ISO/TR 11688-2:1998-09 (E)

Acoustics - Recommended practice for the design of low-noise machinery and equipment - Part 2: Introduction to the physics of low-noise design

Contents

Page

1 Scope 1

2 References 1

3 Definitions 1

4 Acoustical modelling 1

5 Control of airborne and liquid-borne noise 2
5.1 Generation of fluid-dynamic noise 2
5.2 Noise control measures 8

6 Control of structure-borne sound 10
6.1 Model of sound generation 10
6.2 Internal sources 15
6.3 Transmission of structure-borne sound 18
6.4 Control of structure-borne sound transmission by damping 28
6.5 Radiation 30

7 Analysis by measurement methods 35
7.1 Purpose of the analysis 35
7.2 Internal sources 36
7.3 Transmission paths 36
7.4 Radiation 36
7.5 Summary of procedures for the analysis of existing machinery by measurement methods 37

8 Analysis by computational methods 39
8.1 Purpose of the analysis 39
8.2 Deterministic methods 39
8.3 Statistical methods 39
8.4 Applicability of computational methods 39

Annex A Example of the estimation of airborne sound emission of a machine caused by structure-borne and airborne sound emission from a component 41

Annex B Glossary 44
