

ISO/TR 11688-2:1998-09 (E)

Acoustics - Recommended practice for the design of low-noise machinery and equipment - Part 2: Introduction to the physics of low-noise design

Contents		Page
1	Scope	1
2	References	1
3	Definitions	1
4	Acoustical modelling	1
5	Control of airborne and liquid-borne noise	2
5.1	Generation of fluid-dynamic noise	2
5.2	Noise control measures.....	8
6	Control of structure-borne sound.....	10
6.1	Model of sound generation	10
6.2	Internal sources.....	15
6.3	Transmission of structure-borne sound	18
6.4	Control of structure-borne sound transmission by damping.....	28
6.5	Radiation	30
7	Analysis by measurement methods	35
7.1	Purpose of the analysis	35
7.2	Internal sources.....	36
7.3	Transmission paths.....	36
7.4	Radiation	36
7.5	Summary of procedures for the analysis of existing machinery by measurement methods	37
8	Analysis by computational methods.....	39
8.1	Purpose of the analysis	39
8.2	Deterministic methods.....	39
8.3	Statistical methods.....	39
8.4	Applicability of computational methods	39
Annex A Example of the estimation of airborne sound emission of a machine caused by structure-borne and airborne sound emission from a component		41
Annex B Glossary.....		44
Bibliography.....		46
