ISO 10846-1:2008-08 (E)

Acoustics and vibration - Laboratory measurement of vibro-acoustic transfer properties of resilient elements - Part 1: Principles and guidelines

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 2

4 Selection of appropriate International Standard 4

5 Theoretical background 4
5.1 Dynamic transfer stiffness 4
5.2 Dynamic stiffness matrix of resilient elements 5
5.3 Number of relevant blocked transfer stiffnesses 7
5.4 Flanking transmission 8
5.5 Loss factor 8

6 Measurement principles 9
6.1 Dynamic transfer stiffness 9
6.2 Direct method 9
6.3 Indirect method 11
6.4 Driving point method 14

Annex A (informative) Functions related to dynamic stiffness 16

Annex B (informative) Effect of symmetry on the transfer stiffness matrix 17

Annex C (informative) Simplified transfer stiffness matrices 20

Annex D (informative) Linearity of resilient elements 22

Bibliography 23
