ISO 4866:2010-03 (E)

Mechanical vibration and shock - Vibration of fixed structures - Guidelines for the measurement of vibrations and evaluation of their effects on structures

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Source-related factors to be considered 2

5 Structure-related factors to be considered 3

6 Quantities to be measured 4

7 Frequency range and vibration amplitude 5

8 Instrumentation 5

9 Position and mounting of transducers 7

10 Data collection, analysis and assessment 10

11 Methods of measurement and reporting 12

12 Evaluation of vibration responses 14

Annex A (informative) Values of structural response 16

Annex B (informative) Classification of buildings 18

Annex C (informative) Random data 23

Annex D (informative) Predicting natural frequencies and damping of buildings 24

Annex E (informative) Vibrational interaction of the foundation of a structure and the soil 30
