

ISO 4866:2010-03 (E)

Mechanical vibration and shock - Vibration of fixed structures - Guidelines for the measurement of vibrations and evaluation of their effects on structures

Contents		Page
Foreword		iv
Introduction		v
1 Scope		1
2 Normative references		1
3 Terms and definitions		1
4 Source-related factors to be considered		2
5 Structure-related factors to be considered		3
6 Quantities to be measured		4
7 Frequency range and vibration amplitude		5
8 Instrumentation		5
9 Position and mounting of transducers		7
10 Data collection, analysis and assessment		10
11 Methods of measurement and reporting		12
12 Evaluation of vibration responses		14
Annex A (informative) Values of structural response		16
Annex B (informative) Classification of buildings		18
Annex C (informative) Random data		23
Annex D (informative) Predicting natural frequencies and damping of buildings		24
Annex E (informative) Vibrational interaction of the foundation of a structure and the soil		30
Bibliography		36
