ISO 3747:2010-12 (E)

Acoustics - Determination of sound power levels and sound energy level s of noise sources using sound pressure - Engineering/survey methods for use in situ in a reverberant environment

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 2

3 Terms and definitions 2

4 Test environment 6

5 Instrumentation and measurement equipment 6

6 Location, installation and operation of noise source under test 7

7 Measurement procedure 8

8 Calculation of sound power levels and sound energy levels 11

9 Measurement uncertainty 15

10 Information to be recorded 18

11 Test report 20

Annex A (normative) Evaluation of the excess of sound pressure level at a given distance 21

Annex B (informative) Recommendations for the location of the reference sound source and the microphones, if only one position is used for the reference sound source 22

Annex C (normative) Sound power level and sound energy level under reference meteorological conditions 27

Annex D (normative) Calculation of A-weighted sound power levels and A-weighted sound energy levels from octave-band levels 29

Annex E (informative) Guidance on the development of information on measurement uncertainty ... 31
