DIN EN ISO 3745:2012-07 (E)

Acoustics - Determination of sound power levels and sound energy levels of noise sources using sound pressure - Precision methods for anechoic rooms and hemi-anechoic rooms (ISO 3745:2012)

Contents

Page

Foreword 4

Introduction 5

1 Scope 6
1.1 General 6
1.2 Types of noise and noise sources 6
1.3 Test room 6
1.4 Measurement uncertainty 6

2 Normative references 6

3 Terms and definitions 7

4 Reference meteorological conditions 12

5 Test rooms 13
5.1 Acoustic criterion for adequacy of the test room 13
5.2 Criteria for background noise 13
5.3 Criterion for air temperature 14

6 Instrumentation 14
6.1 Instruments for acoustical measurements 14
6.2 Instruments for meteorological measurements 16

7 Definition, location, installation and operation of noise source under test 16
7.1 General 16
7.2 Auxiliary equipment 16
7.3 Noise source location 16
7.4 Mounting of the noise source 17
7.5 Operation of source during test 17

8 Measurement surface 18
8.1 Spherical measurement surface for use in an anechoic room 18
8.2 Hemispherical measurement surface for use in a hemi-anechoic room 18

9 Determination of sound power levels and sound energy levels 19
9.1 Measurements in the test room 19
9.2 Measurement of meteorological conditions 19
9.3 Microphone positions 19
9.4 Determination of sound power levels of a noise source which emits steady or non steady noise 21
9.5 Determination of sound energy levels for a noise source which emits impulsive noise 25
9.6 Calculation of directivity indices 27
9.7 Calculation of surface sound pressure level non-uniformity index 28
9.8 Frequency-weighted sound power level and sound energy level 28

10 Measurement uncertainty 28
10.1 Methodology 28

10.2 Determination of omc 29
10.3 Determination of R0 29
10.4 Typical upper bound values of R0 30
10.5 Total standard deviation, tot , and expanded measurement uncertainty, U 31

11 Information to be recorded 32
11.1 General 32
11.2 Noise source under test 32
11.3 Test room 32
11.4 Instrumentation 32
11.5 Acoustical data 32

12 Test report 33

Annex A (normative) General procedures for qualification of anechoic and hemi-anechoic rooms .. 34

Annex B (normative) Qualification procedure for spaces within test rooms used in the determination of sound power levels and sound energy levels of specific noise sources 41

Annex C (normative) Calculation of A-weighted sound power levels and A-weighted sound energy levels from one-third-octave band levels 43

Annex D (normative) Array of microphone positions on a spherical measurement surface in a free field 45

Annex E (normative) Arrays of microphone positions on a hemispherical measurement surface in a hemi-free field 48

Annex F (normative) Coaxial circular paths of microphones on a hemispherical measurement surface in a hemi-free field 53

Annex G (normative) Meridional paths of microphones on a hemispherical measurement surface in a hemi-free field 54

Annex H (normative) Spiral paths of microphones on a hemispherical measurement surface in a hemifree field 56

Annex I (informative) Guidance on the development of information on measurement uncertainty 57

Bibliography 67
