Mechanical vibration - Rotor balancing - Part 31: Susceptibility and sensitivity of machines to unbalance

Contents		Page
Foreword		iv
Introduction		vi
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Machine susceptibility classification	1
4.1	General	1
4.2	Type I: Low susceptibility	2
4.3	Type II: Moderate susceptibility	2
4.4	Type III: High susceptibility	2
4.5	Machine susceptibility correction factors	2
5	Modal sensitivity	2
5.1	General	2
5.2	Modal sensitivity ranges	3
5.3	Characteristics of modal sensitivity ranges	3
5.4	Values of modal sensitivity	3
5.5	Operating speed	7
5.6	Transient speed	9
6	Experimental determination of modal sensitivity near resonance speed under operational conditions	10
6.1	General	10
6.2	Nyquist diagram procedure	10
6.3	Bode diagram procedure	10
7	Numerical values for the local sensitivity	11
8	Experimental determination of the local sensitivity	12
8.1	General	12
8.2	Procedure	12
9	Damped unbalance sensitivity analysis	13
Annex A (informative)	Explanations of terms	14
Annex B (informative)	Example of polar plot diagram procedure	16
Annex C (informative)	Examples of classification according to modal sensitivity	17
Annex D (informative)	Example of mathematical model applied unbalance	18
Bibliography		19
