

DIN EN ISO 16283-1:2014-06 (E)

Acoustics - Field measurement of sound insulation in buildings and of building elements - Part 1: Airborne sound insulation (ISO 16283-1:2014)

Contents		Page
Foreword		3
Introduction		4
1	Scope	5
2	Normative references	5
3	Terms and definitions	5
4	Instrumentation	9
4.1	General	9
4.2	Calibration	9
4.3	Verification	9
5	Frequency range	9
6	General	10
7	Default procedure for sound pressure level measurement	12
7.1	General	12
7.2	Generation of sound field	12
7.3	Fixed microphone positions	13
7.4	Mechanized continuously-moving microphone	14
7.5	Manually-scanned microphone	15
7.6	Minimum distances for microphone positions	17
7.7	Averaging times	17
7.8	Calculation of energy-average sound pressure levels	18
8	Low-frequency procedure for sound pressure level measurement	19
8.1	General	19
8.2	Generation of sound field	19
8.3	Microphone positions	19
8.4	Averaging time	20
8.5	Calculation of low-frequency energy-average sound pressure levels	20
9	Background noise (default and low-frequency procedure)	21
9.1	General	21
9.2	Correction to the signal level for background noise	22
10	Reverberation time in the receiving room (default and low-frequency procedure)	22
10.1	General	22
10.2	Generation of sound field	23
10.3	Default procedure	23
10.4	Low-frequency procedure	23
10.5	Interrupted noise method	23
10.6	Integrated impulse response method	23
11	Conversion to octave bands	24
12	Recording results	24

13	Uncertainty	24
14	Test report	24
	Annex A (normative) Requirements for loudspeakers	26
	Annex B (informative) Forms for recording results	27
	Annex C (informative) Additional guidance	29
	Annex D (informative) Horizontal measurements -- Examples of suitable loudspeaker and microphone positions	35
	Annex E (informative) Vertical measurements -- Examples of suitable loudspeaker and microphone positions	42
	Bibliography	48
