DIN EN 16703:2015-12 (E)

Acoustics - Test code for drywall systems of plasterboard with steel studs - Airborne sound insulation

Contents

Page

European foreword 4

Introduction 5

1 Scope 6

2 Normative references 6

3 Terms and definitions 6

4 Test code for drywall systems of plasterboard with steel studs 7
4.1 Application 7
4.2 Testing Guidelines 7
4.2.1 Test element 7
4.2.2 Boundary and mounting conditions 7
4.2.3 Test report 8
4.3 Validation of the laboratory with two reference test partitions 8
4.3.1 Test elements 8
4.3.2 Acceptance criteria 8
4.3.3 Remedial investigation 10
4.4 Application of uncertainties 11

Annex A (normative) Reference test partition location in aperture 12

A.1 General 12
A.2 Case A "Aperture without niche and one acoustic break" 12
A.3 Case B "Aperture without niche and two acoustic breaks with Ratio 2:1" 13
A.4 Case C "Aperture with niche and one acoustic break" 13

Annex B (normative) Reference test partition Type 1 14

B.1 Description of Reference test partition Type 1 14
B.1.1 Single Framework, single board layer partition 14
B.2 Installation procedure of partition Type 1 15
B.2.1 Installation of framework with channels and studs 15
B.2.2 Installation of plasterboards 1st side 16
B.2.3 Installation of insulation in cavity 16
B.2.4 Installation of plasterboards 2nd side 16
B.2.5 Jointing for both sides of the partition 16

Annex C (normative) Reference test partition Type 2 18

C.1 Twin framework, double board layer partition 18
C.1.1 General 18
C.1.2 Installation of framework with channels and studs 19
C.2 Installation of plasterboards 20
C.2.1 General 20
C.2.2 Plasterboard inner layer on first side 20
C.2.3 Plasterboard outer layer on first side 20
C.3 Installation of insulation in cavity 21
C.4 Installation of plasterboards 2nd side - Plasterboard inner layer on second side 21

C.5 Plasterboard outer layer on second side 21
C.6 Jointing for both sides of the partition 21

Annex D (informative) Interlaboratory Tests performed for the development of this Test Code standard 22

Annex E (informative) E Modulus - Control Method (static E Modulus with 3 bending points) 24

Annex F (informative) E Modulus - Expertise Method (dynamic E Modulus) 25
