ISO 17534-1:2015-05 (E)

Acoustics - Software for the calculation of sound outdoors - Part 1: Quality requirements and quality assurance

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Termsanddefinitions 1

3 Quality assurance of software with calculation methods implemented 3

4 Requirements for consistently implementable calculation methods 4
4.1 Documentation 4
4.2 Completeness 4
4.3 Unambiguity 5
4.4 Consideration of software strategies 5
4.5 Test cases -- The verification of the correct implementation 5
4.5.1 The purpose of test cases 5
4.5.2 The design of test cases and test scenarios 5
4.5.3 The definition of a set of test cases 6
4.5.4 Single ray point to point calculation module P2P 6

5 Quality requirements for software products 7
5.1 Product description and user documentation 7
5.1.1 Functionality 7
5.1.2 User guidance and user support 7
5.2 Properties of the software to support quality assurance 8
5.2.1 General 8
5.2.2 Control of the model and the calculation 8
5.2.3 Determination of uncertainty caused by the application of approximation procedures 8
5.2.4 Quality assurance interface (QA) to allow data exchange 8

6 Declaration of Conformity (DoC) 8

7 Checks to be done by the program user 9
7.1 Applying the software with test cases 9
7.2 Determination of the uncertainty at receiver points introduced by a modified configurations 9

Annex A (normative) Test cases/scenarios 10

Annex B (normative) Declaration of Conformity (DoC) 15

Annex C (informative) Estimation of uncertainty by statistical evaluation of level differences 18

Annex D (informative) Quality Assurance Interface (QA) 22
