Acoustics - Software for the calculation of sound outdoors - Part 1: Quality requirements and quality assurance

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Terms and definitions	1
3	Quality assurance of software with calculation methods implemented	3
4	Requirements for consistently implementable calculation methods	4
4.1	Documentation	4
4.2	Completeness	4
4.3	Unambiguity	5
4.4	Consideration of software strategies	5
4.5	Test cases -- The verification of the correct implementation	5
4.5.1	The purpose of test cases	5
4.5.2	The design of test cases and test scenarios	5
4.5.3	The definition of a set of test cases	6
4.5.4	Single ray point to point calculation module P2P	6
5	Quality requirements for software products	7
5.1	Product description and user documentation	7
5.1.1	Functionality	7
5.1.2	User guidance and user support	7
5.2	Properties of the software to support quality assurance	8
5.2.1	General	8
5.2.2	Control of the model and the calculation	8
5.2.3	Determination of uncertainty caused by the application of approximation procedures	8
5.2.4	Quality assurance interface (QA) to allow data exchange	8
6	Declaration of Conformity (DoC)	8
7	Checks to be done by the program user	9
7.1	Applying the software with test cases	9
7.2	Determination of the uncertainty at receiver points introduced by a modified configurations	9
Annex A (normative)	Test cases/scenarios	10
Annex B (normative)	Declaration of Conformity (DoC)	15
Annex C (informative)	Estimation of uncertainty by statistical evaluation of level differences	18
Annex D (informative)	Quality Assurance Interface (QA)	22
Bibliography		23
