Acoustics - Software for the calculation of sound outdoors - Part 1: Quality requirements and quality assurance

Contents	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Terms and definitions	1
3 Quality assurance of software with calculation methods implemented	3
4 Requirements for consistently implementable calculation methods	4
4.1 Documentation	4
4.2 Completeness	4
4.3 Unambiguity	5
4.4 Consideration of software strategies	5
4.5 Test cases -- The verification of the correct implementation	5
4.5.1 The purpose of test cases	5
4.5.2 The design of test cases and test scenarios	5
4.5.3 The definition of a set of test cases	6
4.5.4 Single ray point to point calculation module P2P	6
5 Quality requirements for software products	7
5.1 Product description and user documentation	7
5.1.1 Functionality	7
5.1.2 User guidance and user support	7
5.2 Properties of the software to support quality assurance	8
5.2.1 General	8
5.2.2 Control of the model and the calculation	8
5.2.3 Determination of uncertainty caused by the application of approximation procedures	8
5.2.4 Quality assurance interface (QA) to allow data exchange	8
6 Declaration of Conformity (DoC)	8
7 Checks to be done by the program user	9
7.1 Applying the software with test cases	9
7.2 Determination of the uncertainty at receiver points introduced by a modified configurations	9
Annex A (normative) Test cases/scenarios	10
Annex B (normative) Declaration of Conformity (DoC)	15
Annex C (informative) Estimation of uncertainty by statistical evaluation of level differences	18
Annex D (informative) Quality Assurance Interface (QA)	22
Bibliography	23
