ISO 3822-3:2018-01 (E)

Acoustics - Laboratory tests on noise emission from appliances and equipment used in water suppl y installations - Part 3: Mounting and operating conditions for in-line valves and appliances

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Mounting 1
4.1 General 1
4.1.1 General 1
4.1.2 Installation 2
4.1.3 Connection 2
4.2 Fitting to the test pipe 2
4.3 Mounting of in-line valves and appliances with screwed conditions 2
4.4 Mounting of in-line valves and appliances with provision for soldering in copper connecting pipes 2
4.5 Mounting of in-line valves and appliances fitted with copper connecting pipes 2
4.6 Mounting of in-line valves or appliances with two inlets 2
4.7 Discharge connection 3

5 Test procedure 3
5.1 General test conditions 3
5.1.1 General 3
5.1.2 Water temperature 3
5.1.3 Outlets 3
5.1.4 Flow regulating and discharge system 3
5.1.5 Test pressures 3
5.1.6 Water flow rate 3
5.2 Procedure for stop valves 4
5.3 Procedure for control valves 4
5.4 Procedure for valves and appliances operated by water flow 4
5.5 Procedure for automatic in-line valves or appliances operated by water pressure 5
5.6 Procedure for automatic in-line valves and appliances operated by water temperature 5
5.7 Procedure for "safety groups" 5
5.7.1 Safety groups without a pressure reducing valve 6
5.7.2 Safety groups with a pressure reducing valve 6

6 Test report 6

Annex A (informative)Exampleoflownoiseflowresistance 7
