ISO 3740:2019 (E)

Acoustics — Determination of sound power levels of noise sources — Guidelines for the use of basic standards

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Sound power level

- 4.1 Basic information
- 4.2 Reasons for the determination of sound power levels
- 4.3 Basic procedures for determining sound power levels
- 4.4 Quality of determined sound power levels
- 4.5 Noise emission declaration

5 Selection of the most appropriate method in the set of standards

- 5.1 Methods and quantities to be measured and determined
- 5.2 Considerations affecting the selection of a measurement method
- 5.3 Test environment
- 5.4 Selection of basic standards appropriate for measurements in laboratory rooms and special test rooms
- 5.4.1 General
- 5.4.2 Acoustical requirements on the sound field in laboratories and special test rooms
- 5.4.3 Background noise limitation
- 5.5 Selection of basic standards appropriate for in-situ measurements
- 5.5.1 General
- 5.5.2 Hemi-anechoic sound field check
- 5.6 Determination of high-frequency sound power levels

Annex A (informative) Basic International Standards specifying methods for determining sound power levels of machines, equipment and products — Main facts and requirements

Annex B (informative) Acoustical test environments

- B.1 Environments provided by acoustic test laboratories
- B.1.1 General
- B.1.2 Reverberation test rooms
- B.1.3 Special reverberation test rooms
- B.1.4 Anechoic and hemi-anechoic test rooms
- B.2 Environments in situ
- B.2.1 Precision method (accuracy grade 1)
- B.2.2 Engineering methods (accuracy grade 2)
- B.2.3 Survey methods (accuracy grade 3)

Annex C (informative) Measurement uncertainty

- C.1 General aspects
- C.2 Determination of the expanded measurement uncertainty

Annex D (informative) Case studies

- D.1 General
- D.2 Case study 1 — Application of ISO 3744 under free-field (outdoors) conditions — Measurement setup and source
- D.3 Case study 2 — Application of ISO 3744 under in situ conditions — Measurement setup and sound source
- D.4 Case study 3 — Application of ISO 3746 under in situ conditions — Measurement setup and sound source
