## Acoustics — Measurement of speech level reduction of furniture ensembles and enclosures — Part 1: Laboratory method

---

### Contents

	Foreword
	Introduction
1	Scope
2	Normative references
3	Terms and definitions
4	Measurement conditions
4.1	Test room
4.2	Test specimen
4.3	Equipment
4.3.1	Sound source
4.3.2	Measurement equipment
4.4	Microphone positions
5	Determination of level reduction
5.1	Test method
5.2	Level reduction
5.3	Determination of speech level reduction
5.4	Precision
5.5	Typical values
5.6	Application in room acoustic simulations
6	Information to be recorded and reported
6.1	General
6.2	Test environment and test specimen
6.3	Instrumentation
6.4	Acoustical data
Annex A	(informative) Example of the calculation of the main test results
Annex B	(informative) Example of presentation of the main test results
Annex C	(informative) Precision
Annex D	(informative) Examples of the values of speech level reduction
Annex E	(informative) Application of the results in room acoustic design
