ISO/TS 11819-3:2021 (E)

Acoustics — Measurement of the influence of road surfaces on traffic noise — Part 3: Reference tyres

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 General principles

5 Reference tyres

- 5.1 Tyres description
- 5.2 Tyre specifications
- 5.3 Tread pattern
- 5.4 Tread pattern condition
- 5.5 Rubber hardness

6 Test wheel and tyre mounting

7 Tyre run-in

8 Tyre load and inflation

9 Correction for the influence of rubber hardness on CPX levels

- 9.1 General
- 9.2 Correction to CPX levels
- 9.3 Rubber hardness coefficient

10 Correction for the influence of temperature on CPX levels

11 Measurement uncertainty assessment according to ISO/IEC Guide 98-3

12 Documentation

Annex A (normative) Measurement of rubber hardness

- A.1 General
- A.2 Equipment
- A.3 Measurement procedure
- A.4 Temperature correction applied to rubber hardness measurement
- A.5 Calculation and reporting of results

Annex B (informative) Storage and preservation of tyres

Annex C (informative) Availability of the reference tyres

- C.1 General
- C.2 Current manufacturers of the reference tyres

Annex D (informative) Selection of test tyres (market versus reference tyres)
