ISO/TS 22704:2022-04 (E)

Mechanical vibration - Uncertainty of the measurement and evaluation of human exposure to vibration

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Considerations regarding the uncertainty of vibration measurements 7
4.1 Measurement objectives and fixed parameters 7
4.2 Types of uncertainties 8
4.3 Measurement instrumentation uncertainty sources 8

5 Evaluation of the uncertainty 9
5.1 Evaluation of the uncertainty through mathematical modelling 9
5.2 Determination of the uncertainty from interlaboratory tests 10
5.3 Determination (estimation) of uncertainties from field measurements 10

6 Presentation of results 11

7 Use of uncertainties 13
7.1 General 13
7.2 Use of uncertainties in comparisons 13

Annex A (informative) Uncertainty in the measurement of hand-arm vibration at the workplace -- Example for determination of the measurement uncertainty of the vibration exposure during task-based measurements according to ISO 5349-2 14

Annex B (informative) Example for determination of the measurement uncertainty of emission measurements on hand-held and hand-guided machines 25

Annex C (informative) Typical errors 28

Annex D (informative) Statistical background 30
