

ISO/TS 22704:2022-04 (E)

Mechanical vibration - Uncertainty of the measurement and evaluation of human exposure to vibration

Contents	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Considerations regarding the uncertainty of vibration measurements	7
4.1 Measurement objectives and fixed parameters	7
4.2 Types of uncertainties	8
4.3 Measurement instrumentation uncertainty sources	8
5 Evaluation of the uncertainty	9
5.1 Evaluation of the uncertainty through mathematical modelling	9
5.2 Determination of the uncertainty from interlaboratory tests	10
5.3 Determination (estimation) of uncertainties from field measurements	10
6 Presentation of results	11
7 Use of uncertainties	13
7.1 General	13
7.2 Use of uncertainties in comparisons	13
Annex A (informative) Uncertainty in the measurement of hand-arm vibration at the workplace -- Example for determination of the measurement uncertainty of the vibration exposure during task-based measurements according to ISO 5349-2	14
Annex B (informative) Example for determination of the measurement uncertainty of emission measurements on hand-held and hand-guided machines	25
Annex C (informative) Typical errors	28
Annex D (informative) Statistical background	30
Bibliography	31
