

# ISO 14839-5:2022-08 (E)

## Mechanical vibration - Vibration of rotating machinery equipped with active magnetic bearings - Part 5: Touch-down bearings

---

<b>Contents</b>		<b>Page</b>
Foreword .....		v
1	Scope .....	1
2	Normative references .....	2
3	Terms and definitions .....	2
4	General structure and components .....	2
5	Functional targets .....	4
5.1	General .....	4
5.2	Design life .....	6
5.3	Clearance requirements .....	6
5.4	Life-cycle requirements .....	6
6	Touch-down bearing design considerations .....	7
6.1	General .....	7
6.2	Trigger events .....	7
6.2.1	Overload due to abnormal process conditions .....	7
6.2.2	AMB control instability .....	8
6.2.3	Loss of power .....	9
6.2.4	Failure in the AMB system .....	10
6.2.5	Misoperation .....	10
6.3	Transportation duty .....	10
6.3.1	General .....	10
6.3.2	AMBs without permanent magnets .....	11
6.3.3	AMBs with permanent magnets .....	11
6.4	Failure modes .....	12
6.4.1	General .....	12
6.4.2	Rolling element failure modes .....	12
6.4.3	Sliding bearing failure modes .....	13
6.5	Environmental factors .....	13
6.5.1	General .....	13
6.5.2	Corrosion resistance .....	13
6.5.3	Erosion resistance, particulate contamination .....	14
6.5.4	Liquid contamination .....	14
6.5.5	Operating temperature .....	14
6.5.6	Available cooling flow .....	14
6.6	Rotordynamic modelling considerations .....	14
6.6.1	General .....	14
6.6.2	Rotor and housing modelling requirements .....	14
6.6.3	Touch-down bearing soft mount design considerations .....	16
6.6.4	Touch-down bearing clearance design considerations .....	16
6.6.5	Friction between the rotor and touch-down bearing design considerations .....	16
6.7	Contact classification/severity .....	17
6.7.1	Contact duration .....	17
6.7.2	Types of motion .....	17
6.8	Control actions following touch-down bearing contact .....	19
6.8.1	General .....	19
6.8.2	AMB controller action .....	19

6.8.3	Plant/variable-frequency drive control actions .....	19
7	Design and design verification .....	19
7.1	General .....	19
7.2	Design process details .....	20
7.3	Documentation .....	30
8	Condition monitoring and damage estimation methods .....	30
8.1	General .....	30
8.2	Event detection and data capture .....	30
8.2.1	Contact detection .....	30
8.2.2	Contact event .....	30
8.3	Inspection .....	31
8.3.1	General .....	31
8.3.2	Common techniques in non-intrusive inspection .....	31
8.3.3	Intrusive inspection .....	32
8.4	Damage estimation .....	34
8.4.1	Event data .....	34
8.4.2	Inspection-based estimation .....	35
8.4.3	Criteria for further operation .....	36
9	Maintenance and life cycle factors .....	37
9.1	General .....	37
9.2	Inspection plan .....	37
9.2.1	General .....	37
9.2.2	Minimum intervention cycle .....	37
9.3	Interventions .....	37
9.3.1	Routine checks .....	37
9.3.2	Predicted excessive damage accumulation .....	38
9.3.3	Contamination .....	39
9.4	Maintenance actions .....	39
9.4.1	General .....	39
9.4.2	Touch-down-bearing refurbishment .....	39
9.4.3	Touch-down bearing replacement .....	40
9.5	Life-cycle factors .....	41
9.5.1	General .....	41
9.5.2	Spare part management .....	41
9.5.3	Decommissioning, recycling and disposal .....	42
9.5.4	Obsolescence management .....	42
	Bibliography .....	43
