DIN EN ISO 11819-1:2024-10 (E)

Acoustics - Measurement of the influence of road surfaces on traffic noise - Part 1: Statistical Pass-By method (ISO 11819-1:2023)

Contents

Page

European foreword ... **4**

Foreword ... **5**

Introduction ... **7**

1 Scope ... **8**

2 Normative references ... **8**

3 Terms and definitions ... **9**
3.1 Types of noise ... 9
3.2 Measurement method ... 9
3.3 Road speed categories ... 9
3.4 Vehicle categories ... 10
3.5 Measured noise quantities ... 10
3.6 Road surface terms applicable in this method ... 11
3.7 Backing board terms ... 11

4 Symbols and abbreviated terms ... **11**

5 Measuring principle ... **12**

6 Instrumentation ... **12**
6.1 Instruments for acoustical measurements ... 12
6.1.1 General ... 12
6.1.2 Verification ... 12
6.2 Instruments for vehicle speed measurements ... 13
6.2.1 General ... 13
6.2.2 Verification ... 13
6.3 Instruments for temperature measurements ... 13
6.3.1 General ... 13
6.3.2 Verification ... 13

7 Test sites ... **14**
7.1 Selection of measuring site ... 14
7.2 Deviations from free-field conditions ... 14
7.3 Considerations of guard rails and other barriers which can reflect or screen the sound ... 14
7.4 Surface between the tested road surface and microphone ... 15
7.5 Backing board ... 17

8 Traffic conditions ... **17**
8.1 Vehicle classification ... 17
8.2 Selection of vehicles for measurement ... 17
8.3 Minimum number of vehicles ... 18
8.4 Road speed categories ... 19

9 Measuring procedure ... **19**
9.1 Microphone position ... 19
9.2 Calibrations ... 20
9.3 Sound level measurement ... 21
9.4 Frequency spectrum measurement ... 21
9.5 Speed measurement ... 21
9.6 Temperature measurement ... 21

10 Meteorological conditions **21**
10.1 Wind 21
10.2 Temperature 21
10.3 Recommendations on road surface moisture 21

11 Background noise **22**

12 Normalization of data **22**
12.1 Compensating for the effect of the additional (higher) microphone position 22
12.2 Combining vehicle categories H2 and H3+ into a common heavy vehicle category H 22
12.3 Noise versus speed - regression analysis (for passenger cars) 23
12.4 Noise versus speed – normalization to reference speed (for heavy vehicles) 23
12.5 Noise versus speed – normalization of frequency spectra for vehicles in categories P and H 25
12.6 Determination of SPB sound level at reference speeds 25
12.7 Useful speed range for the speed normalization 25
12.8 Correction of sound levels according to temperature 25

13 Measurement uncertainty **26**

14 Reported data **27**
14.1 General information 27
14.2 Information relating to the location and appearance of the test site 28
14.3 Information relating to the type and construction of the tested road surface 28
14.4 Information relating to the condition of the tested surface and environmental factors 28
14.5 Road speed category and vehicle information 28
14.6 Measured and calculated sound level and speed data 28
14.7 Others 29

Annex A (normative) **Vehicle categories** **30**

Annex B (informative) **Determination of the statistical pass-by index (SPBI)** **34**

Annex C (informative) **The backing board variant** **36**

Annex D (informative) **Adding 95 % confidence intervals** **41**

Annex E (informative) **Validity and stability of the method** **42**

Annex F (informative) **Reference road surface** **43**

Annex G (informative) **Monitoring the stability of sound levels of vehicle fleets** **45**

Annex H (informative) **Uncertainty** **47**

Annex I (informative) **Example of test report** **50**

Bibliography **53**
