DIN EN ISO 16032:2024-07 (E)

Acoustics - Measurement of sound pressure level from service equipment or activities in buildings - Engineering method (ISO 16032:2024)

Contents

Page

European foreword ... **3**

Foreword ... **4**

Introduction ... **5**

1 Scope ... **6**

2 Normative references ... **6**

3 Terms and definitions ... **6**

4 Measurement equipment ... **9**

5 Test method — General ... **9**

6 Measurement procedure ... **10**

6.1 General ... 10

6.2 Selection of the corner position for the microphone ... 11

6.3 Selection of the reverberant field positions of the microphone ... 11

6.4 Measurement of sound pressure levels ... 11

6.4.1 Measurement of the equivalent continuous sound pressure level ... 11

6.4.2 Measurement of the maximum sound pressure level ... 12

6.5 Averaging the sound pressure level ... 12

6.6 Determination of the background sound pressure level ... 12

6.7 Standardization or normalization of one–third–octave–band results ... 12

6.8 Calculation of *A*- and *C*-weighted values ... 13

6.9 Sound sources present in the room (additional measurements) ... 13

7 Measurement of reverberation time ... **13**

8 Correction for background noise ... **13**

9 Precision ... **14**

10 Test report ... **15**

Annex A (normative) ***A*-weighting and *C*-weighting correction values** ... **16**

Annex B (normative) **Operating conditions and operating cycles for measuring the maximum sound pressure level and the equivalent continuous sound pressure level** ... **17**

Annex C (informative) **Form for the expression of results** ... **24**

Bibliography ... **25**
