ISO 13473-4:2024-04 (E)

Characterization of pavement texture by use of surface profiles - Part 4: One third octave band spectral analysis of surface profiles

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 2

4 Symbols and abbreviated terms 4

5 Basic outline of methodologies of spatial frequency analysis 5

6 Sampling of surface profiles 7
6.1 Requirements concerning profilometers and data preparations 7
6.2 Sampling of road sections 7
6.3 Measurement of laboratory samples 7
6.4 Texture profile levels (logarithmic scale) 8
6.5 Anti-aliasing filtering 8
6.6 Drop-out correction and interpolation 8
6.7 Resampling to a constant spatial resolution 10
6.8 Spike identification and reshaping the profile 10

7 Spectral analysis in constant-percentage bandwidth bands (octave- or one-third-octave bands) by digital filtering 10

8 Uncertainty of analysis results 11

9 Reporting of analysis results 12

Annex A (normative) Uncertainty of spectral analysis results 13

Annex B (informative) Spectral analysis and profile asymmetry 18

Annex C (informative) Spectral analysis by means of discrete (fast) Fourier transform methods 19

Annex D (normative) Spike removal procedure 27

Annex E (informative) Testing the calculation procedure 30

Annex F (normative) Profile conditioning before filtering 32
