

# DIN EN ISO 5114-1:2025-07 (E)

Acoustics - Determination of uncertainties associated with sound emission measures - Part 1: Sound power levels determined from sound pressure measurements (ISO 5114-1:2024)

---

<b>Contents</b>		<b>Page</b>
Foreword.....		iv
Introduction.....		v
1 Scope.....		1
2 Normative references.....		1
3 Terms and definitions.....		1
4 General concept to describe the uncertainty of measured sound power levels.....		2
5 Determination of $\sigma_{omc}$ .....		3
6 Determination of $\sigma_{R0}$ by round robin tests.....		4
7 Detailed uncertainty budget to determine $\sigma_{R0}$ .....		6
8 Determination of $\sigma_{tot}$ .....		7
Annex A (informative) Detailed uncertainty budget for sound power determinations in (approximated) free fields according to the direct enveloping method.....		9
Annex B (informative) Detailed uncertainty budget for sound power determinations in (approximated) diffuse fields according to the direct method.....		17
Annex C (informative) Detailed uncertainty budget for sound power determinations using a reference sound source.....		22
Bibliography.....		26
