ISO 17201-4:2025-07 (E)

Acoustics - Noise from shooting ranges - Part 4: Calculation of projectile sound

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Projectile sound 5
4.1 General 5
4.2 Regions 5
4.3 Spectrum of an N-wave 6

5 Source description 7
5.1 Source point 7
5.2 Source sound exposure level for streamlined projectiles 7
5.3 Source sound exposure level for non-streamlined projectiles 8
5.4 Spectrum of the source sound exposure level 11

6 Calculating the sound exposure level at a receiver location 11
6.1 Basic formula 11
6.2 Calculation of the attenuation terms 12
6.2.1 Geometric attenuation 12
6.2.2 Non-linear attenuation 14
6.2.3 Non-linear shift of the spectrum 15
6.2.4 Atmospheric absorption, excess attenuation and barrier effects 16

7 Uncertainty in source description and propagation 16
7.1 Overview 16
7.2 Uncertainties in source description 17
7.2.1 General 17
7.2.2 Source point location 17
7.2.3 Broadband source sound exposure level for streamlined projectiles 17
7.2.4 Source sound exposure level for non-streamlined projectiles 18
7.2.5 Characteristic frequency of the N-wave 19
7.2.6 Spectrum of the source sound exposure level 19
7.3 Uncertainties in determining the sound exposure level at a receiver location 19
7.3.1 General 19
7.3.2 The uncertainties at a receiver location for non-streamlined projectiles 19

Annex A (informative) Derivation of constants and consideration of barrier and other effects 20

Annex B (informative) Calculation of projectile sound for projectiles on ballistic trajectories 24

Annex C (informative) Estimation of projectile velocity change 27

Annex D (informative) Calculation examples 30

Bibliography 41
