ISO 14257:2001-10 (E)

Acoustics - Measurement and parametric description of spatial sound distribution curves in workrooms for evaluation of their acoustical p erformance

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Sound distribution in a room 3
4.1 General 3
4.2 Spatial sound distribution curves 3

5 Measurement of the spatial sound distribution curve 5
5.1 Specifications regarding the sound source used for the test 5
5.2 Measurement instrumentation 6
5.3 Measurement path and points 7
5.4 Measurement procedure 8
5.5 Representation of the measured data 8

6 Parametric description of the measured spatial sound distribution curve in view of evaluation of the acoustical performance of workrooms 9
6.1 General 9
6.2 Distance ranges 9
6.3 Determination of the rate of spatial decay of sound pressure levels per distance doubling, DL2 9
6.4 Determination of the excess of sound pressure level with respect to a reference sound distribution curve, DLf 10
6.5 Evaluation of measured data 12

7 Information to be recorded and reported 12

Annex A (normative) Performance requirements for the sound source to be used for the test 14

Annex B (normative) Correction of measured sound distribution curves to account for differences in ground reflections and source directivity 16

Annex C (informative) Example of use of this International Standard 17
