

ISO 14257:2001-10 (E)

Acoustics - Measurement and parametric description of spatial sound distribution curves in workrooms for evaluation of their acoustical performance

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Sound distribution in a room	3
4.1	General	3
4.2	Spatial sound distribution curves	3
5	Measurement of the spatial sound distribution curve	5
5.1	Specifications regarding the sound source used for the test	5
5.2	Measurement instrumentation	6
5.3	Measurement path and points	7
5.4	Measurement procedure	8
5.5	Representation of the measured data	8
6	Parametric description of the measured spatial sound distribution curve in view of evaluation of the acoustical performance of workrooms	9
6.1	General	9
6.2	Distance ranges	9
6.3	Determination of the rate of spatial decay of sound pressure levels per distance doubling, DL2	9
6.4	Determination of the excess of sound pressure level with respect to a reference sound distribution curve, DLf	10
6.5	Evaluation of measured data	12
7	Information to be recorded and reported	12
Annex A (normative) Performance requirements for the sound source to be used for the test		14
Annex B (normative) Correction of measured sound distribution curves to account for differences in ground reflections and source directivity		16
Annex C (informative) Example of use of this International Standard		17
Bibliography		25
