ISO 18649:2004-07 (E)

Mechanical vibration - Evaluation of measurement results from dynamic tests and investigations on bridges

Contents

Page

Foreword iv

1 Scope 1

2 Normative references 1

3 Terms and definitions 2

4 Vibration measurement 2
4.1 General considerations 2
4.2 Monitoring of a bridge during construction and for commissioning 3
4.3 Monitoring of a bridge in service 8

5 Data analysis and method of structural identification 9
5.1 General 9
5.2 Data analysis and domain 9
5.3 Digitizing 9
5.4 Identification of vibration characteristics in the time domain 9
5.5 Identification of vibration characteristics in the frequency domain 12
5.6 Structural identification and inverse analysis 12

6 Modelling bridges and their surrounding environment 13
6.1 Modelling bridge structures 13
6.2 Modelling of traffic loads 14
6.3 Modelling of human walking and its dynamic effect 15
6.4 Wind load 15
6.5 Modelling of the ground for viaduct vibration 15

7 Evaluation of monitored data and its application 16
7.1 Evaluation method and evaluation criteria 16
7.2 Evaluation during construction 16
7.3 Evaluation of structural safety in service 17
7.4 Evaluation of serviceability 18
7.5 Evaluation of environmental vibration 18

Annex A (informative) Data analysis in time and frequency domains 19

Annex B (informative) Identification of vibration characteristics 23

Annex C (informative) Modelling of walking load 24

Bibliography 25
