ISO 14837-1 :2005-07 (E)

Mechanical vibration_- Ground-borne noise and vibration arising from rail systems_- Part_1: General guidance

Contents

Page

Foreword ... iv

Introduction ... v

1 Scope ... 1

2 Normative references ... 1

3 Terms and definitions ... 1

4 Overview of ground-borne vibration and ground-borne noise ... 3
4.1 Circumstances of interest ... 3
4.2 Source of ground-borne vibration and ground-borne noise ... 3
4.3 Propagation ... 8
4.4 Receiver ... 8

5 Effects of ground-borne vibration and ground-borne noise ... 9
5.1 General ... 9
5.2 Perception of ground-borne vibration (1 Hz to 80 Hz) ... 9
5.3 Perception of ground-borne noise (16 Hz to 250 Hz) ... 9
5.4 Effect on buildings (1 Hz to 500 Hz) ... 9
5.5 Effect on very sensitive equipment and sensitive tasks (*circa* 1 Hz to 200 Hz) ... 10

6 Metrics ... 10
6.1 General ... 10
6.2 Perception of ground-borne vibration ... 10
6.3 Perception of ground-borne noise ... 11
6.4 Effects on buildings ... 11
6.5 Effects on very sensitive equipment ... 12

7 Ground-borne noise and vibration measurements ... 12
7.1 Equipment (instrumentation chain) ... 12
7.2 Measurement locations ... 13
7.3 Data to be acquired ... 13
7.4 Data analysis ... 13
7.5 Measurement report ... 14

8 Concept of models ... 14
8.1 Model development ... 14
8.2 Stages of assessment ... 15

9 Prediction models ... 20
9.1 General ... 20
9.2 Parametric models ... 21
9.3 Empirical models ... 22
9.4 Semi-empirical models ... 24

10 Development, calibration, validation and verification ... 24

Annex A (informative) **Checklist of issues relevant to modelling and measurement** ... 26

Annex B (informative) **Mitigation of ground-borne vibration and ground-borne noise** ... 32

Annex C (informative) **Process and tools for development, calibration, validation and verification** ... 39

Bibliography ... 44
