

ISO 21299:2009-04 (E)

Powered ride-on turf care equipment - Roll-over protective structures (ROPS) - Test procedures and acceptance criteria

Contents	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms, definitions and symbols	1
4 Test apparatus and equipment	3
4.1 Test equipment for horizontal loading	3
4.2 Test equipment for vertical crush loading	3
4.3 Other measuring apparatus	3
5 Preparation for strength testing	4
5.1 Purpose	4
5.2 Preparation rules for governing testing	4
6 Test procedures	4
6.1 Test sequence	4
6.2 Horizontal loading	5
6.3 Vertical crushing test	9
6.4 Observations during testing	10
7 Deflection-limiting volume (DLV)	10
8 Tolerances	12
9 Acceptance conditions	12
9.1 General requirements	12
9.2 Deflection-limiting volume/ground plane	12
9.3 Horizontal overload test for energy-absorbing ROPS	13
9.4 Vertical crush overload test	14
9.5 Cold weather embrittlement	14
10 Extension to other machines	16
11 Labelling	16
12 Test report	16
Annex A (normative) Requirements for providing resistance to brittle fracture of ROPS at reduced operating temperature	17
Annex B (informative) ROPS standards judged to provide operator protection comparable to this International Standard	19
Annex C (informative) Test report for roll-over protective structure	20
Bibliography	22
