Wind turbines - Part 4: Design requirements for wind turbine gearboxes

Contents

Page

FOREWORD 7
INTRODUCTION 9
1 Scope 10
2 Normative references 10
3 Terms, definitions and conventions 12
3.1 Terms and definitions 12
3.2 Conventions 15
4 Symbols, abbreviations and units 17
4.1 Symbols and units 17
4.2 Abbreviations 21
5 Design for reliability 23
5.1 Design lifetime and reliability 23
5.2 Design process 24
5.3 Documentation 26
5.4 Quality plan 26
6 Drivetrain operating conditions and loads 27
6.1 Drivetrain description 27
6.1.1 General 27
6.1.2 Interface definition 27
6.1.3 Specified requirements across interfaces 28
6.2 Deriving drivetrain loads 28
6.2.1 Wind turbine load simulation model 28
6.2.2 Wind turbine load calculations 29
6.2.3 Reliability of load assumptions 29
6.3 Results from wind turbine load calculations 29
6.3.1 General 29
6.3.2 Time series 30
6.3.3 Fatigue load 30
6.3.4 Extreme loads 31
6.4 Operating conditions 31
6.4.1 General 31
6.4.2 Environmental conditions 31
6.4.3 Operating strategies 32
6.5 Drivetrain analysis 32
7 Gearbox design, rating, and manufacturing requirements 32
7.1 Gearbox cooling 32
7.2 Gears 33
7.2.1 Gear reliability considerations 33
7.2.2 Gear rating 33
7.2.3 Load factors 34
7.2.4 Gear materials 36
7.2.5 Subsurface initiated fatigue 37
7.2.6 Gear accuracy 37
7.2.7 Gear manufacturing 37
7.3 Bearings 38
7.3.1 General 38

7.3.2 Bearing reliability considerations 38
7.3.3 Bearing steel quality requirements 39
7.3.4 General design considerations 39
7.3.5 Bearing interface requirements 42
7.3.6 Bearing design issues 43
7.3.7 Bearing lubrication 46
7.3.8 Rating calculations 47
7.4 Shafts, keys, housing joints, splines and fasteners 50
7.4.1 Shafts 50
7.4.2 Shaft-hub connections 50
7.4.3 Flexible splines 51
7.4.4 Shaft seals 51
7.4.5 Fasteners 51
7.4.6 Circlips (snap rings) 52
7.5 Structural elements 52
7.5.1 Introduction 52
7.5.2 Reliability considerations 53
7.5.3 Deflection analysis 53
7.5.4 Strength verification 53
7.5.5 Static strength assessment 54
7.5.6 Fatigue strength assessment 58
7.5.7 Material tests 62
7.5.8 Documentation 63
7.6 Lubrication 63
7.6.1 General considerations 63
7.6.2 Type of lubricant 64
7.6.3 Lubricant characteristics 65
7.6.4 Method of lubrication 66
7.6.5 Oil quantity 67
7.6.6 Operating temperatures 68
7.6.7 Temperature control 68
7.6.8 Lubricant condition monitoring 69
7.6.9 Lubricant cleanliness 69
7.6.10 Lubricant filter 70
7.6.11 Ports 71
7.6.12 Oil level indicator 71
7.6.13 Magnetic plugs 71
7.6.14 Breather 72
7.6.15 Flow sensor 72
7.6.16 Serviceability 72
8 Design verification 72
8.1 General 72
8.2 Test planning 72
8.2.1 Identifying test criteria 72
8.2.2 New designs or substantive changes 73
8.2.3 Overall test plan 73
8.2.4 Specific test plans 73
8.3 Workshop prototype testing 74
8.3.1 General 74

8.3.2 Component testing 74
8.3.3 Workshop testing of a prototype gearbox 74
8.3.4 Lubrication system testing 75
8.4 Field test 75
8.4.1 General 75
8.4.2 Validation of loads 75
8.4.3 Type test of gearbox in wind turbine 76
8.5 Production testing 77
8.5.1 Acceptance testing 77
8.5.2 Sound emission testing 77
8.5.3 Vibration testing 77
8.5.4 Lubrication system considerations 77
8.5.5 System temperatures 77
8.6 Robustness test 77
8.7 Field lubricant temperature and cleanliness 77
8.8 Bearing specific validation 78
8.8.1 Design reviews 78
8.8.2 Prototype verification/validation 78
8.9 Test documentation 79
9 Operation, service and maintenance requirements 79
9.1 Service and maintenance requirements 79
9.2 Inspection requirements 79
9.3 Commissioning and run-in 79
9.4 Transport, handling and storage 80
9.5 Repair 80
9.6 Installation and exchange 80
9.7 Condition monitoring 80
9.8 Lubrication 80
9.8.1 Oil type requirements 80
9.8.2 Lubrication system 80
9.8.3 Oil test and analysis 81
9.9 Operations and maintenance documentation 81
Annex A (informative) Examples of drivetrain interfaces and loads specifications 82
Annex B (informative) Gearbox design and manufacturing considerations 93
Annex C (informative) Bearing design considerations 96
Annex D (informative) Considerations for gearbox structural elements 122
Annex E (informative) Recommendations for lubricant performance in wind turbine gearboxes 125
Annex F (informative) Design verification documentation 140
Annex G (informative) Bearing calculation documentation 143
Bibliography 151

Figure 1 – Shaft designation in 3-stage parallel shaft gearboxes 15
Figure 2 – Shaft designation in 3-stage gearboxes with one planet stage 16
Figure 3 – Shaft designation in 3-stage gearboxes with two planet stages 17
Figure 4 – Design process flow chart 25
Figure 5 – Examples of bearing selection criteria 39

Figure 6 – Blind bearing assembly 45
Figure 7 – Definition of section factor $n_{pl,\sigma}$ of a notched component 56
Figure 8 – Idealized elastic plastic stress-strain curve 57
Figure 9 – Synthetic S/N curve (adapted from Haibach, 2006) 60
Figure A.1 – Modular drivetrain 82
Figure A.2 – Modular drivetrain with 3-point suspension 83
Figure A.3 – Integrated drivetrain 83
Figure A.4 – Reference system for modular drivetrain 85
Figure A.5 – Rear view of drivetrain 86
Figure A.6 – Reference system for modular drivetrain with 3-point suspension 87
Figure A.7 – Reference system for integrated drivetrain 88
Figure A.8 – Example of rainflow counting per DLC 90
Figure A.9 – Example of load revolution distribution (LRD) 91
Figure C.1 – Load bin reduction by lumping neighbouring load bins 97
Figure C.2 – Consumed life index (CLI) 99
Figure C.3 – Time share distribution 99
Figure C.4 – Effects of clearance and preload on pressure distribution in radial roller bearings (from Brandlein et al, 1999) 102
Figure C.5 – Nomenclature for bearing curvature 103
Figure C.6 – Stress distribution over the elliptical contact area 105
Figure C.7 – Examples of locating and non-locating bearing arrangements 114
Figure C.8 – Examples of locating bearing arrangements 114
Figure C.9 – Examples of accommodation of axial displacements 114
Figure C.10 – Examples of cross-locating bearing arrangements 115
Figure C.11 – Examples of bearing arrangements with paired mounting 115
Figure D.1 – Locations of failure for local (A) and global (B) failure 123
Figure D.2 – Local and global failure for two different notch radii 123
Figure D.3 – Haigh-diagram for evaluation of mean stress influence (Haibach, 2006) 124
Figure E.1 – Viscosity requirements versus pitch line velocity 126
Figure E.2 – Test apparatus for filterability evaluation 134
Figure E.3 – Example for circuit design of combined filtration and cooling system 138
