Gas turbines - Exhaust gas emission - Part 1: Measurement and evaluation

Contents		Page
1	Scope	1
2	Normative references	1
3	Definitions	1
4	Symbols	2
5	Conditions	4
5.1	Gas turbine and fuel	4
5.2	Measured values	4
5.3	Standard conditions	4
6	Measurements	5
6.1	Determination of constituents in exhaust gas	5
6.2	Guideline for the arrangement of the measurement system	5
6.3	Performing the test, test report, evaluation	6
7	Instrumentation	8
7.1	Types of measuring device	8
7.2	Specification for NO _x analysers	8
7.3	Specification for CO and CO ₂ analysers	9
7.4	Specification for sulfur oxides analysers	10
7.5	Specification for unburned and partially burned hydrocarbons analysers	11
7.6	Specification for ammonia analysers	12
7.7	Specification for oxygen analysers	13
7.8	Specification for smoke analysers	15
7.9	Specification for solid particle analysers	16
8	Quality of measurement	23
8.1	Preamble	23
8.2	Methods for calibration	23
9	Conversion of data	23
9.1	General	23
9.2	Conversion between wet and dry exhaust gas	24
9.3	Conversion to the particular exhaust gas oxygen level	24
9.4	Conversion to the constituent mass flow related to the dry exhaust gas volume flow at normal conditions and to a specific oxygen content	24
9.5	Conversion to power Output related values	24
9.6	Conversion to consumed fuel energy related values	24
Annexes A Typical example of test results and their evaluation		25
B Information regarding the major constituents of the exhaust gas		29
C Physical properties of gaseous constituents		30
D Bibliography		33
