ISO 25745-2:2015-04 (E)

Energy performance of lifts, escalators and moving walks - Part 2: Energy calculation and classification for lifts (elevators)

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 2

4 Data collection and analysis tools 2

5 Calculation of energy consumption 3
5.1 Methodology 3
5.2 Calculation of running energy per day 3
5.2.1 Usage and number of starts per day 3
5.2.2 Average travel distance 4
5.2.3 Average running energy per metre 4
5.2.4 Start/stop energy consumption 4
5.2.5 Running energy of an average cycle with empty car 5
5.2.6 Daily running energy 5
5.3 Calculation of non-running (idle/standby) energy consumption per day 6
5.3.1 Running time per day 6
5.3.2 Non-running time per day 7
5.3.3 Time ratios of idle/standby modes 7
5.3.4 Daily non-running (idle/standby) energy consumption 8
5.4 Total energy consumption per day 8
5.5 Total energy consumption per year 8
5.6 Method for determining the daily energy consumption for energy storage systems 8

6 Lift energy efficiency classification 9
6.1 Rationale 9
6.2 Performance level for running 9
6.3 Performance levels for idle/standby 10
6.4 Classification of energy performance of the lift 10

7 Specific running energy for the reference cycle 11

8 Reporting 11

Annex A (informative) Specific usage category 13

Annex B (informative) Example calculation 14

Annex C (informative) Symbols 16

Bibliography 18
